

**ATTENTION!**  
**REMOVE FILM PRIOR TO FITTING**

- Please note prior to fitting your bath carefully remove all the packaging and film from the bath and examine the bath for damage and suitability of colour match.
- Check the panel fit and match prior to installation.

No Claims for the above will be accepted once the bath is fitted.

- Baths should be set at supplied panel height (535mm).
- The 18mm baseboard is encapsulated on all baths listed above (i.e. under the GRP reinforcement).
- Half of the panel clips supplied should be secured (if possible) to the floor.

Curve Bath  
1698 x 800mm

Curve Panel Prior to Fitting

Present front panel to the bath as shown in drawing. Position the panel and locate the returned edge into the panel clips that have been fixed prior to installation. Scribe a line on the wall and floor following the contour of the panel, remove the panel from the bath and scribe a line 3mm in front from the first scribed line. On the second scribed line fasten a batten on the wall, allowing room for the returned edge of the panel top and bottom. Secure four panel clips to the floor, positioned at equal distances from the centre of the curve. Present the panel to the bath engaging the top and bottom return of the panel between the roll of the bath and the panel clips. Secure the panel to the wall battens using the appropriate fixings (not supplied).
