## Twin handle basin mixer matt black

20004010445

### CARE AND MAINTENANCE:

To maintain the appearance of this product, ensure that it is regularly cleaned only using a clean, soft damp cloth. A solution of warm water and a mild detergent may be used where necessary, and then the fitting rinsed thoroughly and wiped dry. Any other cleaning action will invalidate your warranty.

If the mixer tap has a diffuser it should be unscrewed and cleaned periodically in warm water.

Abrasive cleaners, scouring cleaners and acidic cleaners must not be used under any circumstances. Avoid contact with all solvents (including chlorinated solvents, ketones or acetones as these may result in surface deterioration or etching). Also avoid contact with any harsh household chemicals such as oven cleaners, drain cleaners, rust removers, paint strippers and toilet bowl cleaners, bar keepers friend, brasso or similar products.

### MAINTENANCE

Isolate the water to the tap before performing any form of internal

#### Maintenance.

#### CLEANING THE CARTRIDGE

The concealed cartridge should give trouble free service, but in the event of any problems, servicing is straight forward.

To remove the cartridge.

Pull off the cover cap and with an hexagonal key loosen the screw, but do not remove it. Pull off the handle and unscrew the cover. Using the correct size spanner unscrew and remove the retaining nut. Pull out the cartridge taking note of it's orientation. Wash the cartridge with clean running water and make sure that any trapped debris has been removed. Dry and lightly grease the seal (only use silicone grease) and replace the cartridge followed by the nut, cover and handle.

### INSTALLATION GUIDELINES

1. Installation should be carried out by a competent engineer, in accordance with water regulations.
2. Before installation, ensure supply pipes are flushed clean. Debris or loose particles will affect the efficiency of the ceramic disc cartridge. Failure to flush through pipe work before installation of taps may cause serious damage to the ceramic disc cartridge and can cause the tap to drip for which Bathstore will not be liable.
3. For mixer taps, it is recommended that hot & cold pressures are equally balanced.
4. Ceramic cartridge in hard water areas. To prolong the life and reduce servicing periods we recommend that a suitable water softener be fitted. Consult your installer/designer for details.

First shut off your water heating system then, with your mains stop cock closed, open the lowest hot and cold taps in the house and allow to run until the cold storage tank and pipes are empty (the hot water storage cylinder always remains full).

Fitting isolating valves to the inlet feeds is recommended for ease of maintenance.

### INSTALLATION

**Remember to turn off the mains water supply before connecting to any existing pipe work.**

Screw the flexible pipes into the mixer body, and fully hand tighten. Place mixer in position to see if any alteration to the existing supply pipework is necessary. After making any necessary alterations to the pipework, pass the mixer base ring and washer over the flexible pipes and threaded stud to form a seal on the sink top. Pass the tails and fixing stud through the hole in the basin from above, and place the mixer in position on the basin.

Slide the C-shaped black washer and then the metal retaining plate up the tails and secure screwing the fixing nut finger tight.

Check that the mixer body is correctly positioned to the rear and tighten the fixing. The tap needs to be fixed firmly but do not over tighten as damage may be caused to the sink.

If using copper tails they will need to be gently turned outwards, then supported approximately half-way down and turned inwards, making the two pipes parallel again but further apart thus making room for the couplings to be fitted. It is recommended that 15mm x 15mm compression fittings to be used to connect the mixer to supply pipes. Hot water should be connected to the left inlet when the tap is viewed front the front.

### ATTENTION

Having first checked all new connections, turn on the mains stop cock, close all taps except the new mixer and as the system starts to refill check for leaks.

Once you have satisfied yourself that there are no leaks, switch on the water heating.

### DIMENSIONS:

Height of the body	263mm
Reach of the spout	155mm
