# Bike Guard Curv

**B&W** International

**Part no. BH96015**

Curv® is a unique and innovative material that combines high stiffness and tensile strength with outstanding impact resistance and low weight. B&W's bike guard curv weighs only 8.2kg, with the full pack of accessories, including 29" wheel bags and gear bags, taking the total weight to only 10.9kg!

The overall design is visually stunning, with soft curves and strong lines, but the functionality is equally impressive. The Curv® shells slot into each other, making the bike guard curv as good as crush proof. The bike frame is fixed to the lower shell with a 'variable fixing system' – it's held away from the shell on foam blocks which are positioned as required on Velcro strips. There are protectors for all vulnerable components, two wheel bags, and four gear bags which are designed to fit around the frame. The bike guard curv is compressed and held tightly closed with three straps incorporating steel tensioning lockable buckles, suitable for TSA compatible locks.

Moving the bike guard curv is easy, with inline skate wheels at the back and rotating castors at the front. The bike guard curv will follow your every movement whether you pull it on all 4 wheels or have to lift up the front and run with it!

The bike guard curv is designed for all bikes with wheels up to 29", including bikes with integrated seat posts. It conforms to the baggage requirements of all major airlines.

**Lightest, strongest, smartest - the B&W bike guard curv**

## Specifications:

- External 1310 x 910 x 315mm
- Internal 1300 (base) x 1070 (top) x 840 x 300mm
- Shipping carton 1320 x 900 x only 200mm
- Weight 8.2kg, 10.9kg with all accessories
- Interlocking crush proof lightweight Curv® shells
- 2 x sheets of protective foam padding
- 2 x 29" wheel bags
- Chain guard, crank guard, fork spacers + tube guards
